Profile

Senior UX & Product designer with 7 years of designing complex tools for expert users. Most recently I led UX across an internal product portfolio at one of Scandinavia's largest VFX studios. I take work from research to shipped product, and I build the systems and team habits that let design scale.

Experience

ILP VFX / Senior UX Designer & Design Lead · 2025–present

- Led UX across ILP's internal R&D product portfolio: directed a team of 3 designers and set priorities, standards and quality together with Product Management.
- Took a new production planning platform from research to live product, replacing legacy systems. It covers crewing (resource planning) and bidding, and is built as SaaS for studios across the group.
- Ran user research and usability testing with crewing managers, talent managers and executive producers, and iterated on the live product in two-week cycles.
- Built a lightweight design system and UX acceptance criteria with Engineering, so implementation stayed consistent across products.

Amply / Product Designer & Project Manager · 2023–2025

- **ILP VFX:** Led UX research for a new production planning platform replacing legacy systems. I mapped crewing workflows with crewing and talent managers, which shaped the MVP. Hired in-house by ILP in September 2025.
- **SmartOpt (Optimum Earnings):** As product owner and product designer, took a fuel optimization app for the freight industry from pre-study to launch. I did the research and service blueprint, set up the design system and designed the main user flows, and owned the roadmap and backlog.
- **Länsförsäkringar Göteborg och Bohuslän:** Owned design and project management for 5 internal digital services, including a GDPR compliance tool where I was also product owner.
- **Ziklo:** Turned an existing residual value tool that users hadn't adopted into one that fit their process. I mapped the valuation workflow with users, redesigned within existing constraints and supported the rollout.

Qmatic / UX/UI Designer & Agile Team Lead · 2019–2023

- Researched, prototyped and shipped the product experience for a new SaaS appointment platform and cloud solution.
- Owned the design system backlog and organised the design system forum.
- As Agile Team Lead from 2022, introduced Lean UX to the development team.

InUse / Master's thesis · 2019

- Researched and designed a path for turning an existing component library and its processes into a working design system.

Education

Skills

- **Research:** design research, usability testing, workshop facilitation
- **Design:** product design, interaction and UI design, service design, rapid prototyping
- **Systems and process:** design systems, Lean UX, design sprints, web accessibility
- **Leadership:** design team lead, agile team lead, stakeholder management

Tools

Figma (Design, FigJam, Make), Miro, Jira, Linear, Adobe CC, Procreate, AI tools for research synthesis and prototyping
